Chandra Sekhar Mullu

Quantitative Developer
sekharmullu@gmail.com
+91 9703093034
Bangalore

A Google and DataCamp certified Python developer with 5+ years of experience in finance and freelance projects. Proficient in data engineering, optimizing data pipelines, MLOps, and managing financial models. Skilled in the design, development and deployment of distributed microservices. Passionate about open-source software development, automation, and platform engineering. Love to build things that change things

Education

IIIT Nuzvid (2018 - 2022)
Integrated Bachelor of Technology
Computer Science -
8.73 CGPA

Certifications

Software Engineering with Python
DataCamp

Experience

Millennium — July 2022 - Present
Quantitative Developer

- Designed and developed a distributed computing framework to efficiently compute firm stress on over 2M positions across 4k scenarios.
- Architected a library for enterprise risk calculations using Rust and implemented cross-language bindings for Python and Java usingArrow.
- Created acustom hierarchy for risk calculations at any individual entity or aggregation within Millennium's fund of funds structure using GraphQL, leveraging MCP to generate aggregations via LLMs.
- Implemented an event-driven streaming ETL workflow that optimized enterprise risk reporting for the CIO office, reducing SLAs by 3 hours.
- Designed and implemented a data orchestration library that simplifies data retrieval from multiple sources across teams.
- Built an internal library (compute-grid) to spin up on-demand Ray/Dask clusters with CPU/memory/IO quotas and cost-aware autoscaling
- Established a cloud-native deployment pipeline from scratch, achieving 50% faster deployments and increased developer productivity.

Marsview.ai acquired by Eltropy — August 2021 - June 2022
AI Backend Engineer

- Developed and deployed NLP models and microservices for real-time communication and analytics, serving up to 1 million requests
- Integrated the real-time API stack with Eltropy One, a product that enables secure and compliant messaging for financial institutions
- Implemented a custom LRU cache to store token embeddings using Redis (similar to RAG), boosting the async stack performance by 900%
